

VIGNESH R

Software Engineer | CI/CD, Automation & Reliability
Cuddalore, Tamil Nadu | 8778919006 | vickyvijay1500@gmail.com

PROFESSIONAL SUMMARY

Software Engineer at Capgemini supporting Nokia NetAct software delivery in a production Linux environment. Hands-on experience with Java and Bash automation, CI/CD pipeline troubleshooting, root cause analysis, and monitoring application health with Grafana. Skilled in Docker and Kubernetes, Git/Gerrit workflows, and release and configuration management, with a focus on service reliability, availability, and reducing manual operational effort.

TECHNICAL SKILLS

Reliability & Operations: Site Reliability Engineering (SRE) fundamentals, Incident and Ticket-Queue Resolution, Root Cause Analysis (RCA), Problem Determination, Monitoring, Release & Configuration Management

Scripting & Automation: Java, Shell Scripting (Bash), Object-Oriented Programming (OOP), Operational Automation

CI/CD & Version Control: CI/CD Pipelines, Jenkins, Git, Gerrit, GitHub, Build & Deployment Automation

Containers & Cloud: Docker, Kubernetes, Minikube, Cloud-Native Application Deployment, Azure (foundational)

Monitoring: Grafana, Log and Data-Flow Monitoring

Systems & Networking: Linux (RHEL, Ubuntu), Systems Debugging, TCP/IP, DNS

WORK EXPERIENCE

Software Engineer — Capgemini

Oct 2025 – Present

Nokia Telecom Project (NetAct Software Delivery)

- Developed and maintained Java-based automation scripts to streamline release workflows and reduce manual operational effort in a production Linux environment.
- Debugged and resolved CI/CD pipeline failures using Git/Gerrit workflows, applying systematic root cause analysis to restore delivery continuity.
- Monitored application health and system data flows with Grafana, and worked release and configuration ticket queues with development and operations teams to drive timely issue resolution.
- Supported migration of manual release and configuration processes into standardized, Git-based CI/CD workflows, improving repeatability and reducing manual errors during deployment.
- Applied Docker and Kubernetes knowledge to support containerized application delivery within the telecom software stack.

PROJECTS

Movie Recommendation Web App — Kubernetes Deployment (Minikube)

2025

- Containerized a full-stack web application with Docker and deployed it to a local Kubernetes cluster using Minikube, independently configuring the Linux host.
- Diagnosed and resolved image-pull errors and service naming mismatches through systematic troubleshooting of the container networking stack.
- Applied Kubernetes Pods, Services, and Deployments and Linux administration concepts hands-on.

Intelligent Pharmacy Management System — Billing & Expiry Notifications

2025

- Built a full-stack application using Java and Spring Boot with inventory tracking, billing, and automated medicine expiry notification modules.
- Managed builds and dependencies with Maven and used Git for version control; structured the project for CI/CD readiness with build automation and environment configuration.

CERTIFICATIONS

- KCNA — Kubernetes and Cloud Native Associate
- Oracle Generative AI Certification

EDUCATION

Bachelor of Technology (B.Tech), Artificial Intelligence and Data Science

2025

VSB Engineering College
